CONCLUSION

The **AI Personal Study Assistant** project successfully demonstrates the use of Generative AI in education. This project focuses on Cybersecurity Fundamentals and helps students learn important concepts through study materials, an educational website, and an AI-powered chatbot. The chatbot can answer students' questions based on the uploaded study material, making learning easier and more interactive. This project helped me understand how Generative AI tools such as ChatGPT and Chatbase can be used to develop useful educational applications. Overall, the project provides a simple and effective way to support independent learning, improve cybersecurity awareness, and make studying more accessible and engaging.
